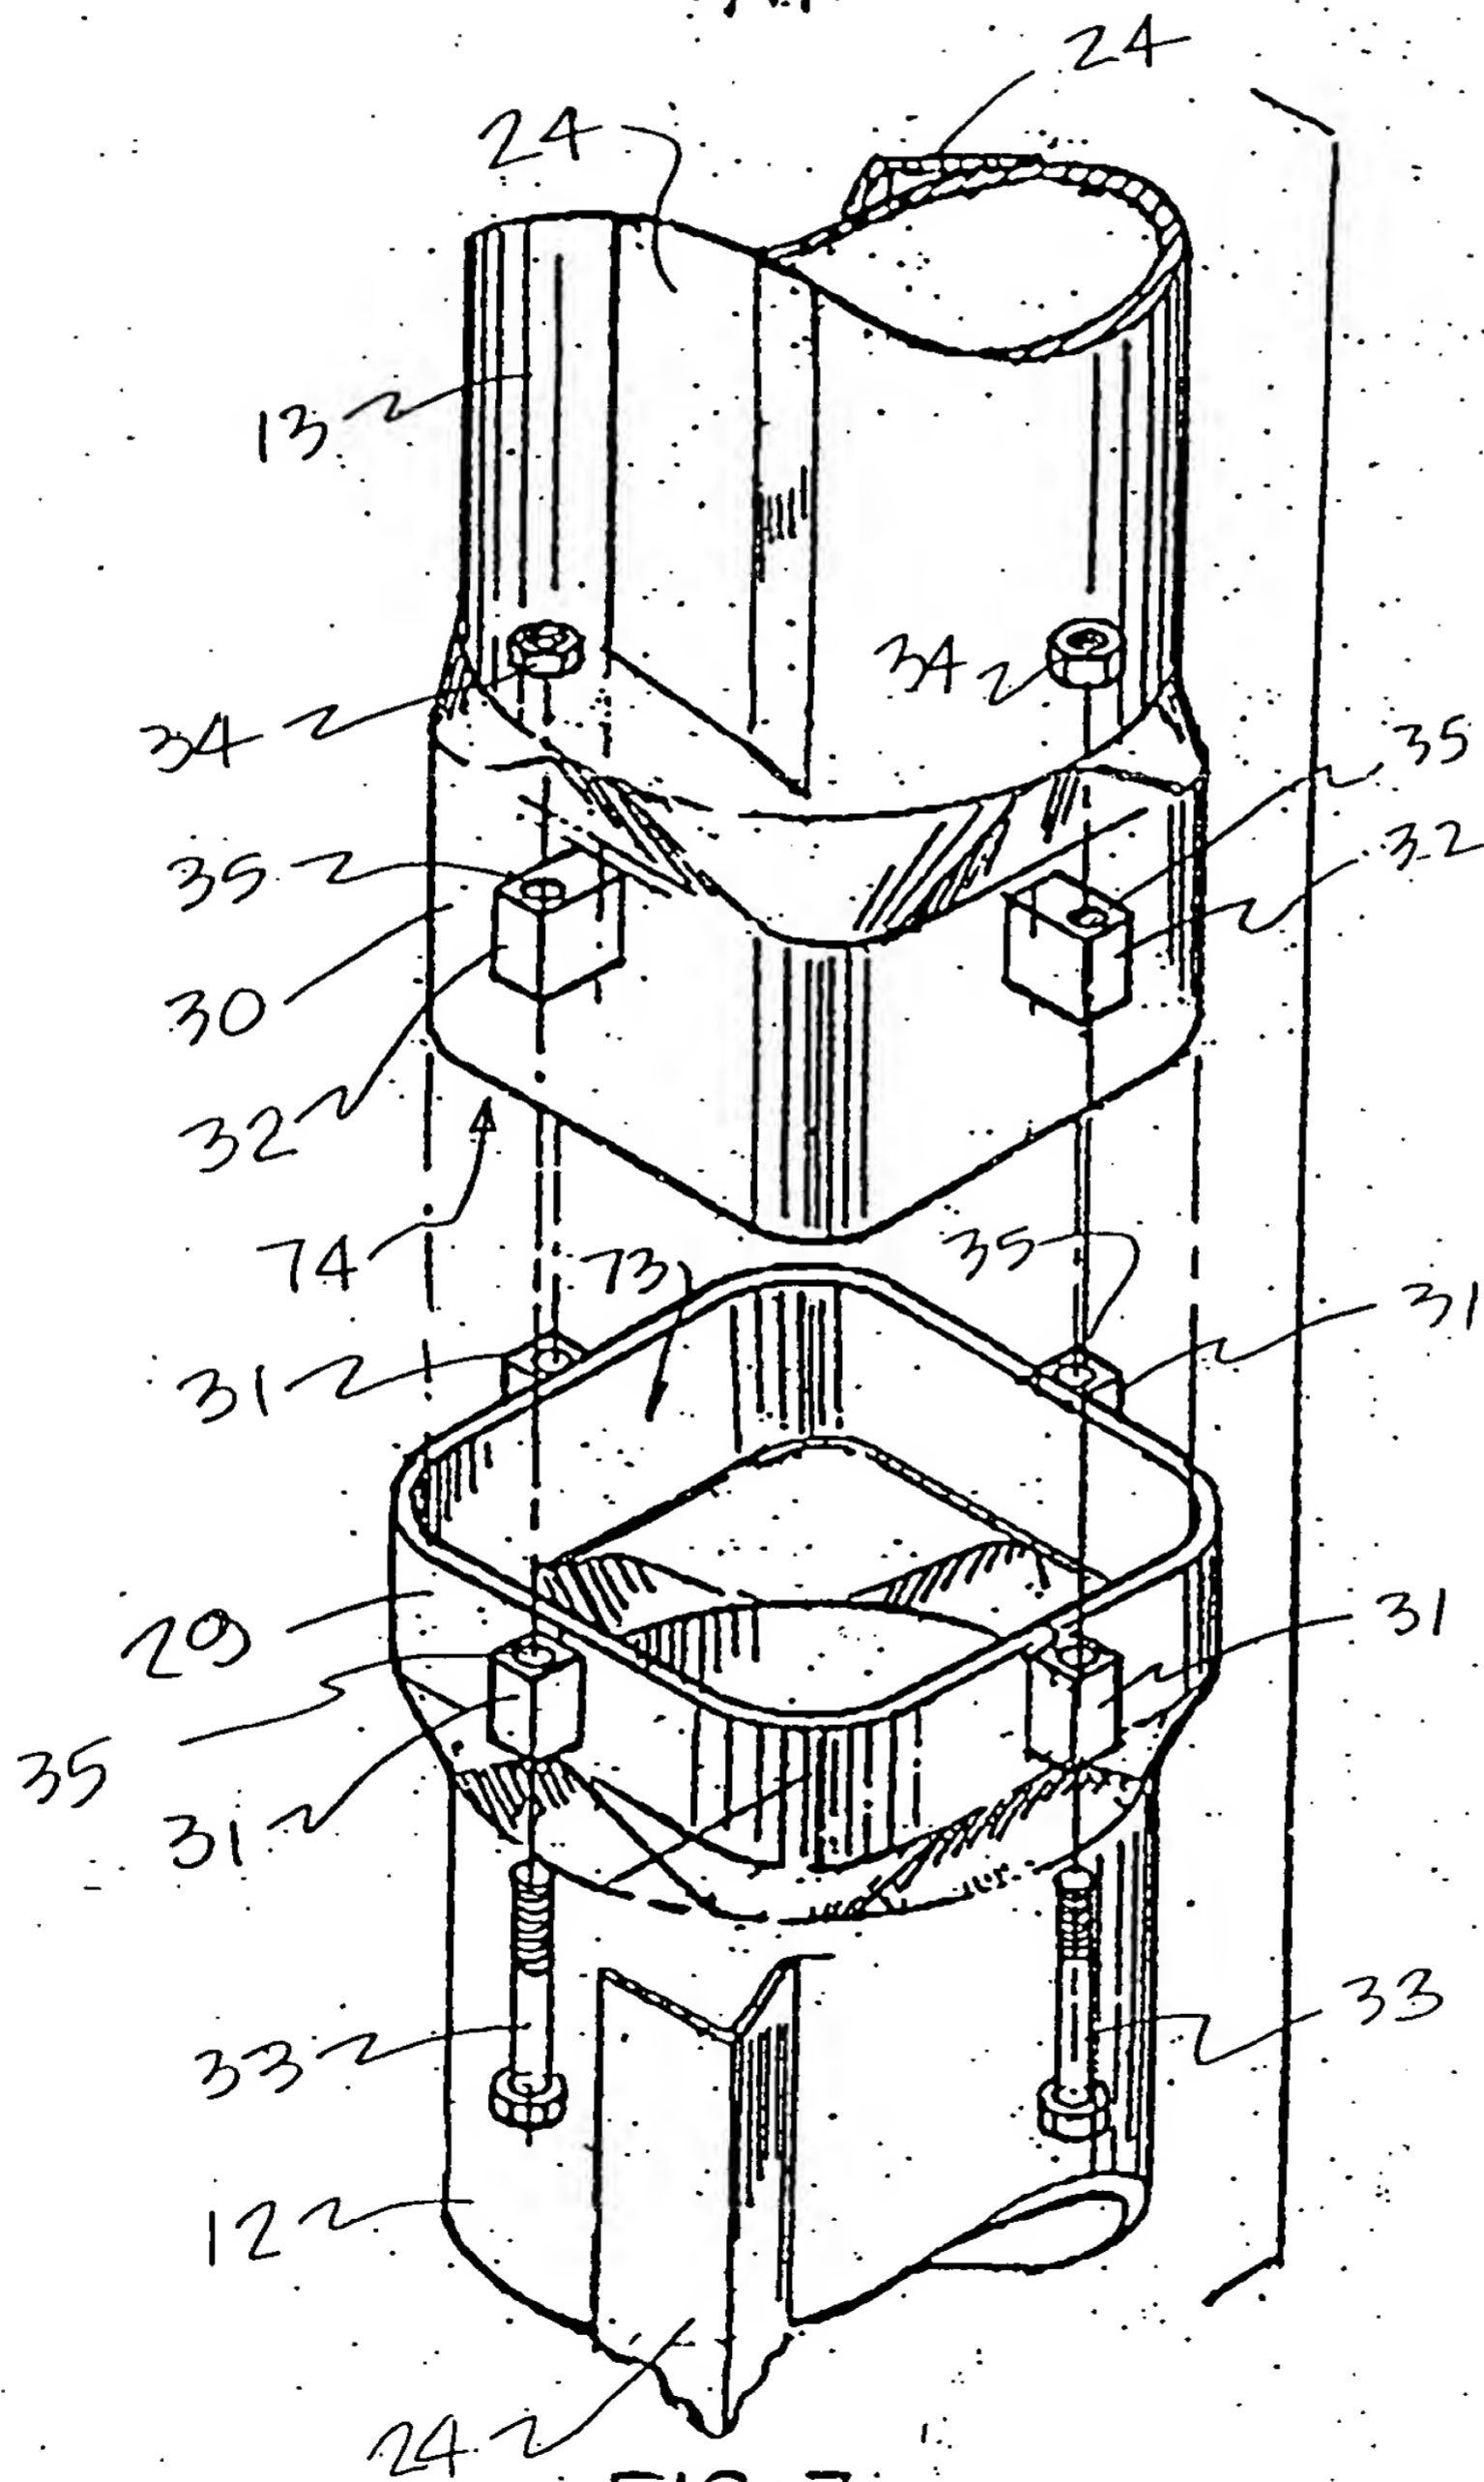

FIG. 3.

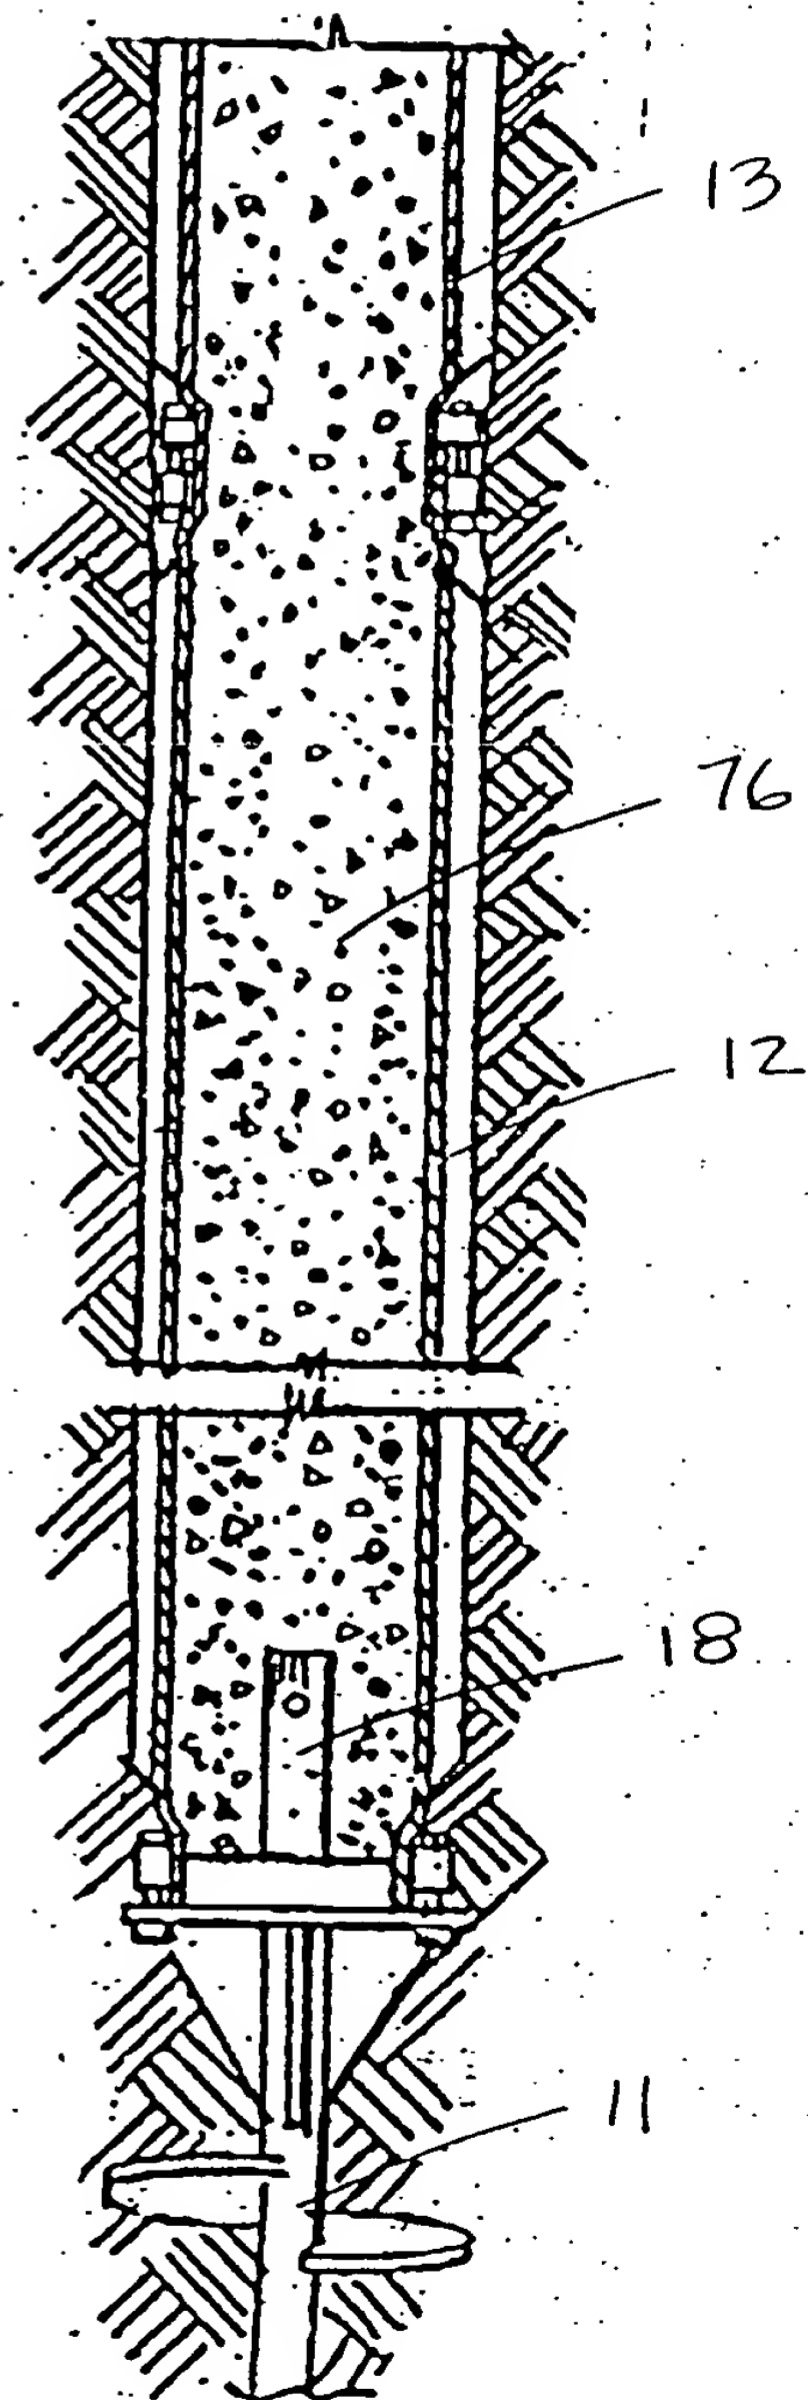

FIG. 13A.

This is a drawing of a device which is used to measure the amount of light which is reflected from a surface. The device is made of a material which is transparent to light of the wavelength which is being measured. The device is used by placing it on a surface and measuring the amount of light which is reflected from the surface. The device is used in a variety of applications, including the measurement of the reflectance of surfaces, the measurement of the reflectance of coatings, and the measurement of the reflectance of materials.
